To Henry Morgan <[henry.morgan@inflite.nz](#)>

Hey there,

We hope you've been having a good experience with [your project henry.morgan@inflite.nz's Project](#) (project ref: renzfipfymtmfmmhny).

Your project is depleting its Disk IO Budget. This implies that your project is utilizing more Disk IO than what your compute add-on can effectively manage. You can check your daily Disk IO consumption [here](#) and hourly [here](#).

When your project has consumed all of your Disk IO Budget,

- Response times on requests can increase noticeably
- CPU usage rises noticeably due to IO wait
- **Your instance may become unresponsive**

We have created a guide that explains Disk IO in more detail and what you can do to address this issue: [High Disk IO Consumption Guide](#) .

Different compute add-ons come with [different baseline performances](#). So, you can also consider upgrading your [compute add-on](#) as your performance needs increase with your usage.
